

## **Instruction of examination**

### **Statistics for Business & Economics September 2022**

The assessment (see details below) consists of a written exam and the oral defence of the report. The written exam and the oral defence will take place **in presence for all the students**, with the exception of those students who are tested positive or in quarantine (see “**circolare n 56673 del 27 maggio 2022 del Magnifico Rettore**”).

#### **For all the students**

After registering on ESSE3 (within 5 days before the date of exam as by rules), students will be contacted via ESSE3 on their institutional email address for the recognition, which will take place 3 days (72 hours) before the date of the exam at 10.00 am. In case recognition dates overlap with dates of other exams, students are requested to send an email to the Professor with indication of the exam concerned before 10.00 am of the same day. After the exam, students are requested to send another email to arrange for identification. They will be contacted via Microsoft Teams immediately after. **If students do not show up** on the day of the identification, they cannot attend the exam.

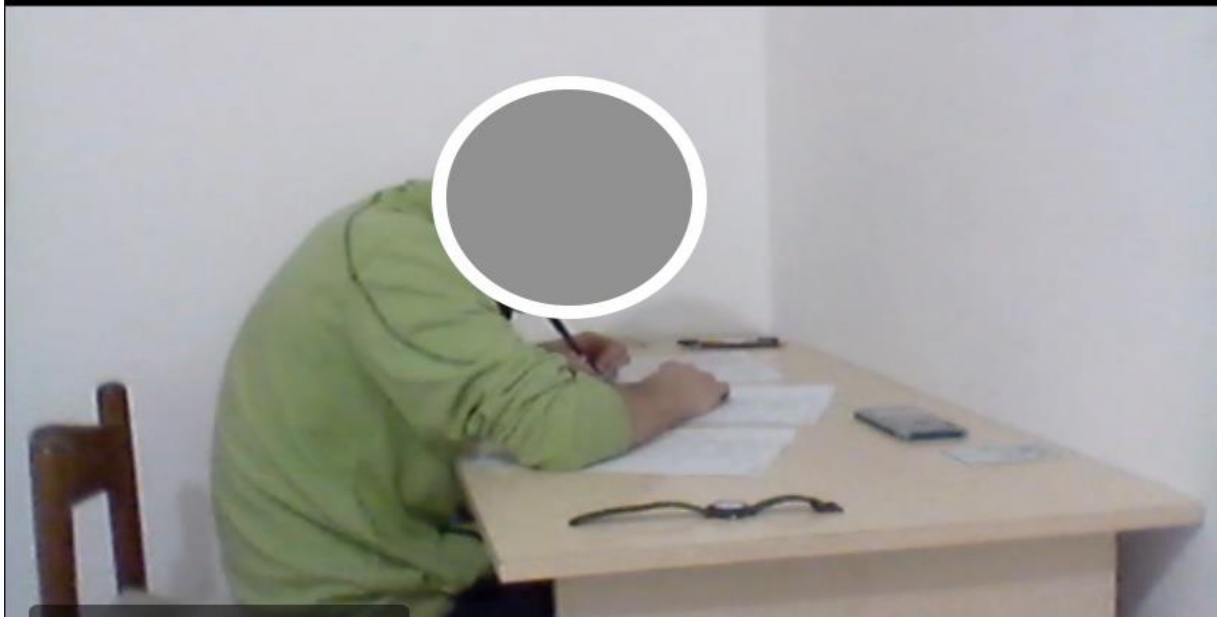

#### **Written exam and oral defence in presence**

Students will attend the exams in presence at the University of L’Aquila, zone Acquasanta. The date of the oral defence will be communicated to the students the day of the written exam.

#### **Remote (online) exam.**

For students who are in the conditions mentioned in the rectoral circular, they requested to communicate the need to take the remote written exam on Microsoft Teams at the time of recognition (three days before the date of the written exam), and no later than that, under penalty of exclusion from the exam. Those students in quarantine will take the oral defence online as well.

For those who will take the remote written exam, professor will send the appropriate link (TEAMS) via ESSE3 to students on the day the recognition is called. The station to carry out the written exam at a distance is indicated below

In case of interruption, before and during the exam, due to the poor connection, professor will reserve the right to evaluate the exam. During the exam, students are not allowed to record the exam or leave the workstation. Students must remain connected in audio and video until the end of the exam, under penalty of exclusion from the exam.

In case students turn out to be tested positive and in quarantine just after the written exam in presence, they are allowed to take the oral defence online (remote), prior communication to the professor by email 3 days (72 hours) before the oral exam takes place, under penalty of exclusion from the exam.

## **Assessment**

The assessment consists of two parts:

- a) A written exam: three numerical questions.
- b) A report of 2000 words, which students must write and defend. The oral defence will take place for all the students on a date which will be made public after the written exam.

The report must be sent 3 days (72 hours) before the date of the exam. **The students must use their institutional email address (...@univaq.it)** to send their report. Otherwise, they won't be able to attend the exam.

The report must be sent along with MATLAB code and data. The subject of the email must contain title of the course, word "report", name and surname of the student along with the ID number. If students fail to pass the exam, it is requested to write a new report for the next attempt.

**Final mark**

Three numerical questions for the written exam: 40%

Report and oral defence: 60%
